How does this sound?

The FOV/NOV U.S. EPA issued to USG states that the Walworth Facility violated PSD solely by installing the skip hoist pulley. After the FOV/NOV and the Section 113 Conference, U.S. EPA discovered that USG filed a March 23, 1992 Request for Permit Review to WDNR for the skip hoist pulley installation, and adding a fourth blow chamber at Walworth as part of the same permitted project, which U.S. EPA will consider the Walworth "major modification" going forward.
